

Description of FAC Analog Bass Drum

Eleven analog bass drum samples produced with the Moog Moogerfooger MF101. The modulation of the filter has been performed by Doepfer's modules. These samples have been recorded through the RME Fireface 800 audio interface at high quality : 24 -bit 96,000 kHz.

Licence terms

« FAC Analog Bass Drum » is ROYALTY FREE. The user has the right to use the samples contained in this packs without restrictions.

How to contribute to Sound Design Addicted project ?

- Join <http://www.facebook.com/SoundDesignAddicted> You will get more samples, tutorials and could give feedbacks.
- Share my facebook page, samples packs and tutorials.
- Participate to my project by making a donation. It's really easy with PayPal and will take only few minutes.

Important notes on donation

Those donations will help me to get some new plugs or hardware to use in the design of new sounds.

Most people donate five or ten dollars so don't think a small contribution is not worth the effort - it adds up over time.

The "donate" button is on the top of the Facebook page (navigation bar). The paypal service accepts donations made with credit cards, debit cards, and PayPal account.

As Sound Design Addicted is a not-for-profit organization, not a charitable organization, so I'm unable to provide charitable tax receipts.

Enjoy « FAC Analog Bass Drum »,
